

**Topic Track:** Green Buildings

**Title:** New Thinking for High Performance Buildings

**Summary:**

Murray will be presenting on a new way of thinking in the building industry so that we can do our part in contributing to the creation of a sustainable economy. He will elaborate on how the building industry is entering into a paradigm shift that is beginning to embrace sustainable business practices. Murray discusses why we are at this important crossroads, the influences that are driving change and methods such as Integrated Project Delivery for improving building performance and delivery. He will discuss the impact on business by various companies including his own, that have focused on the principles of sustainability to ensure their companies' sustainable advantage.

**Target Audience:** All levels.

**Learning Objective:** What you should know about the changes the building industry is going through towards sustainable building design and development.
